

Yousef Osman

Software Engineer - Product, Mobile & Cloud

yousefmobiledev@gmail.com | Mississauga, ON | github.com/yousef022 | linkedin.com/in/yousefosman

SUMMARY

Software engineer who builds product software end to end, from browser and mobile experiences to APIs, automation, and cloud infrastructure. Built a Chrome extension and supporting web platform, a managed Android device system, and reliable identity-verification and fleet-operations workflows.

TECHNICAL SKILLS

Product & Frontend: TypeScript/JavaScript, React, React Native, Chrome Extensions, HTML/CSS.

Mobile & Device: Kotlin, Android Enterprise/DPC, device-owner provisioning, kiosk mode, Swift, Firebase.

Backend & APIs: Node.js/Express, Python/FastAPI, REST, authentication/sessions, webhooks, API integrations.

Cloud & Data: AWS CDK, Lambda, API Gateway, DynamoDB, S3; PostgreSQL, Redis, MongoDB, Docker.

Quality & AI: Automated testing, Git, CI/CD, observability, OpenAI Codex, Gemini APIs.

WORK EXPERIENCE

Software Engineer - Product Engineering (Browser, Mobile & Cloud) Jul 2025 - Aug 2026
deepidv *Toronto, ON*

- Delivered end-to-end features across 6 connected applications and services - Chrome extension, authentication, customer dashboard, verification app, admin console, and AWS backend - spanning UI, APIs, data, and cloud.
- Expanded configurable identity verification across 3 applications, 8 verification methods, and 4 routed outcomes, keeping admin configuration, backend decisions, and applicant journeys aligned.
- Reduced verification friction by removing an unnecessary Continue step across 8 flow types and cutting repeat capture work by 50% across 2 recovery flows, while preserving a fallback for interrupted sessions.
- Built and hardened 2 device-facing products: deepeye's 4-layer browser-to-cloud scanning experience and deepcam's Kotlin/React Native Android platform with provisioning, 5 fleet lookup paths, and encrypted app updates.
- Strengthened quality and customer isolation across frontend, admin, and backend by adding 310 automated tests across 36 files and centralizing tenant authorization across 20 session operations.

Software Developer - Fleet Automation & APIs (TypeScript, Node.js, Redis) Aug 2024 - Jul 2025
Big Instance Technologies *Mississauga, ON*

- Improved generator onboarding and monitoring efficiency by ~90% by replacing manual fleet work with TypeScript/Node.js APIs, Bull/Redis automation, dashboards, and alerts.
- Made long-running generator jobs easier to recover and troubleshoot by adding observable background workflows and production alerts for a Canadian telecom deployment.

Full Stack Developer Intern - Validation Platform (Python, FastAPI, React) Feb 2024 - Aug 2024
CleanList.ai *Toronto, ON*

- Reduced fraudulent and low-quality emails by ~90% by building FastAPI validation services backed by Redis and MongoDB.
- Made campaign results and credit usage easier for customers to understand through React/TypeScript dashboards and REST integrations.

Research Assistant - Mobile ML (Kotlin, Swift, TensorFlow) Sep 2022 - Dec 2023
SOTI *Oakville, ON*

- Improved Android fall-detection accuracy by ~30% over baseline by building and evaluating TensorFlow/Python models on mobile-sensor data.
- Reached ~78% accuracy on a surface-impact classifier and turned Android/iPhone accelerometer and gyroscope data into documented evaluation results.

EDUCATION

Sheridan College Jan 2020 - Dec 2025
Honours Bachelor of Computer Science (Mobile Computing) *Oakville, ON*
